Batterie Service Tool

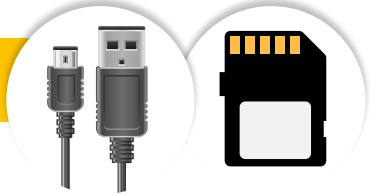
Why choose for the battery configuration tool?

In vehicles with start/stop technology, an energy management system monitors the state of charge of the starter battery, it counts the number of starts, regulates the power output from the alternator to the starter battery and saves these parameters.
Based on this information, the starter battery is individually recharged while driving. Since every starter battery slowly ages during operation, it must inevitably be replaced after a certain period of use.
To ensure that the energy management system in the vehicle can adapt to the new starter battery, it must be registered when it is changed.

Failure to do so may result in error codes and the new starter battery may fail prematurely.

Scope of delivery



- iQReset
- instruction manual
- OBD2 connection cable
- Storage bag
- SD memory card
- USB connection cable

lebenslang kostenloser UPDATESERVICE

Functions overview

- Register and deregister the starter battery from the vehicle's energy management system
- Reading out the history data of the energy management system (depending on the vehicle)
- Erasing error codes in the energy management system
- Save history data for later printouts
